

UltraSeal XT[®] plus⁺™ THE LEADER in sealants since 1998*
 pit and fissure sealant

BOTTOM LINE:

“Simply the Best!”*

“As a pediatric dentist for 38 years, prevention of cavities is the cornerstone of our practice. We have tried all the sealant products, and **UltraSeal XT plus has been the absolute best** for ease of application and long-term retention and durability. The best testimony is having moms who were our patients bring their kids to us for sealants. Many of the **moms still have sealants in place** and have no cavities.

DR. JAMES HEFFNER – DAVIDSONVILLE, MD

“A pediatric dentist can’t get any more minimally invasive than preventing the problem to begin with...and I have **never found a sealant material with an outcome that even rivals UltraSeal XT plus**. It’s simply the best.

DR. THOMAS M. MUSSON – NORTH WILKESBORO, NC

“Being a pediatric dentist, this is **one material I cannot practice without**. I have never found such a **user-friendly sealant** that is so easy to apply and with such excellent retention as UltraSeal XT plus.

DR. DAVID GOLDSTEIN – ORLANDO, FL

“I love the UltraSeal XT plus sealant. I have used many different sealant products in my office as well as the dental school in which I am faculty. Actually, all the pediatric dental instructors had tried eight different sealants to compare, and **UltraSeal XT plus was unanimously the sealant of choice**. The viscosity, multiple shades, partially filled consistency, and the fact it is fluoride-releasing make UltraSeal XT plus the most reliable and superior sealant that I choose to use on my patients.”

DR. ANGELA M. STOUT – ERDENIHEIM, PA

Since 1998*

Effective and easy to use, UltraSeal XT plus pit and fissure sealant is safe and reliable.

- A 58%-filled resin, UltraSeal XT plus sealant offers low polymerization shrinkage, ideal strength and wear resistance, and high documented retention rates¹
- UltraSeal XT plus sealant features ideal viscosity; it flows easily into the tiniest pits and fissures, yet doesn't run after placement
- The unique Inspiral[®] Brush tip allows precise, efficient placement of UltraSeal XT plus sealant because its internal helical channel and ridge thin the resin to a flowable consistency
- Use UltraSeal XT plus sealant with PrimaDry[®] drying agent to enhance pit and fissure penetration and eliminate moisture that can cause failure in other hydrophobic sealants

Designed to Deliver

With its adjustable fibers and helical channel, the Inspiral Brush tip is designed to optimally deliver UltraSeal XT plus sealant.

The tight fibers of the Inspiral Brush tip are small enough to deliver UltraSeal XT plus sealant directly into the tiniest pits and fissures, ensuring proper placement and an optimal seal.
